

Insta Lock Boxes (3233 & 3240) Instalation Guide

*Products may not be exactly as shown

- Center the Drill Template over the closed container door, at the desired height. Using the felt pen, mark the four drill points onto the container.
- Carefully drill out the four points. Make sure to drill a pilot hole using the 1/4" drill bit. Caution, drill slowly! Use a slow RPM to prevent damaging the drill bit and overheating and hardening the steel.
- Insert carriage bolts in slots of lock box.
- Position the right Lock Box Component through the drilled holes. Secure with nuts and washers.
- Using the supplied bolts and washers, secure the left Lock Box Component through the left side drilled holes.

Attach the padlock. Your container is now secure!

"Warning - All products that require installation or fabrication should never be done until you have the product in hand to take exact measurements. While every attempt is made to make sure product specifications are accurate in these pages, there is the possibility the products have been updated or a small variance between production has made the measurement off from what's in this book. Installation of our products may require some fabrication experience, and in no way does warranty cover installation mistakes
